Online Supporting Information S1. The benchmark dataset $\mathbb{S} = \mathbb{S}^{\text{AMP}} \bigcup \mathbb{S}^{\text{non-AMP}}$, where $\mathbb{S}^{\text{AMP}}$ contains 1,388 AMP sequences while $\mathbb{S}^{\text{non-AMP}}$ contains 1,440 non-AMP sequences. The AMP sequences are further classified into four subsets according to their attributes, i.e., $\mathbb{S}^{\text{AMP}} = \mathbb{S}_1^{\text{AMP}} \bigcup \mathbb{S}_2^{\text{AMP}} \bigcup \mathbb{S}_3^{\text{AMP}} \bigcup \mathbb{S}_4^{\text{AMP}}$, where $\mathbb{S}_1^{\text{AMP}}$ contains 1,274 antibacterial peptides, $\mathbb{S}_2^{\text{AMP}}$ 101 anticancer/tumor peptides, $\mathbb{S}_3^{\text{AMP}}$ 481 antifungal peptides, and $\mathbb{S}_4^{\text{AMP}}$ 102 antiviral peptides. A sequence in $\mathbb{S}^{\text{AMP}}$ may belong to more than one attribute. Of the 1,388 AMP sequences, 912 belong to one attribute, 385 to two attributes, 80 to three attributes, and 11 to four attributes.

I. $\mathbb{S}^{\text{AMP}}$: 1,388 AMP sequences

(1) $\mathbb{S}_1^{\text{AMP}}$: 1,274 antibacterial peptides
